MY STALL BUTLER PUBLIC

Invented By
RICHARD NAVIN

My Stall Butler Public is a "Touchless" liquid foam soap and water spray mist dispenser, Personal Hygiene System, for use in a Commercial or Public Restroom Stall. My Stall Butler offers users both personal and facilities hygiene. The user of My Stall Butler simply has a bowel movement and wipes as normal. Then, they dispense 1 pump of liquid foam soap onto 4-5 squares of folded 2-ply toilet paper, wipe, and dispose into the toilet. Then repeat the process with the water spray mist to rinse. It also gives the user of the stall, the ability to clean the toilet seat prior to, or after use, promoting "Facilities Hygiene". The water and soap buttons will be touch sensitive, and an LED light will indicate which button is activated. Doors at the bottom of the unit will open and close when awake and asleep respectively. The unit will go into sleep mode after 45 seconds of non-use to extend battery life.

Open to licensing agreement for manufacturing and marketing.
